

Enterprise Identity for the Cloud Era

Protect your organisation with the number one cloud identity and access governance platform

As business shifts to the cloud, your organisation must protect itself from evolving threats, secure skyrocketing digital entities, and comply with changing regulations. Saviynt is the only identity platform designed to help companies accelerate cloud initiatives and solve the toughest security and compliance challenges in record time.

Saviynt Enterprise Identity Cloud brings together identity governance (IGA), granular application access, cloud security, and privileged access management (PAM) to secure all critical applications, data, and infrastructure across on-prem, multi-cloud, and hybrid environments.

No matter where you are on your identity journey, Saviynt helps modernise your security program and protect sensitive and privileged access for every identity – machine or human – within or beyond your enterprise.

Make Identity Your Business Enabler

Face Audits with Confidence

Remain in continuous compliance and avoid an average of \$2M in fines

Eliminate Unmanaged Identity Risk

Reduce the time it takes to onboard new identities by more than 90%

Automate Identity Workflows

Streamline identity tasks and eliminate 3 weeks of manual processes each year

Simplify Governance at Cloud Speed

The Saviynt Enterprise Identity Cloud combines multiple identity governance capabilities into a single cohesive platform built on a powerful identity warehouse – so you can unify controls and risk management for every identity, app, and cloud across your business.

Identity Governance & Administration (IGA)

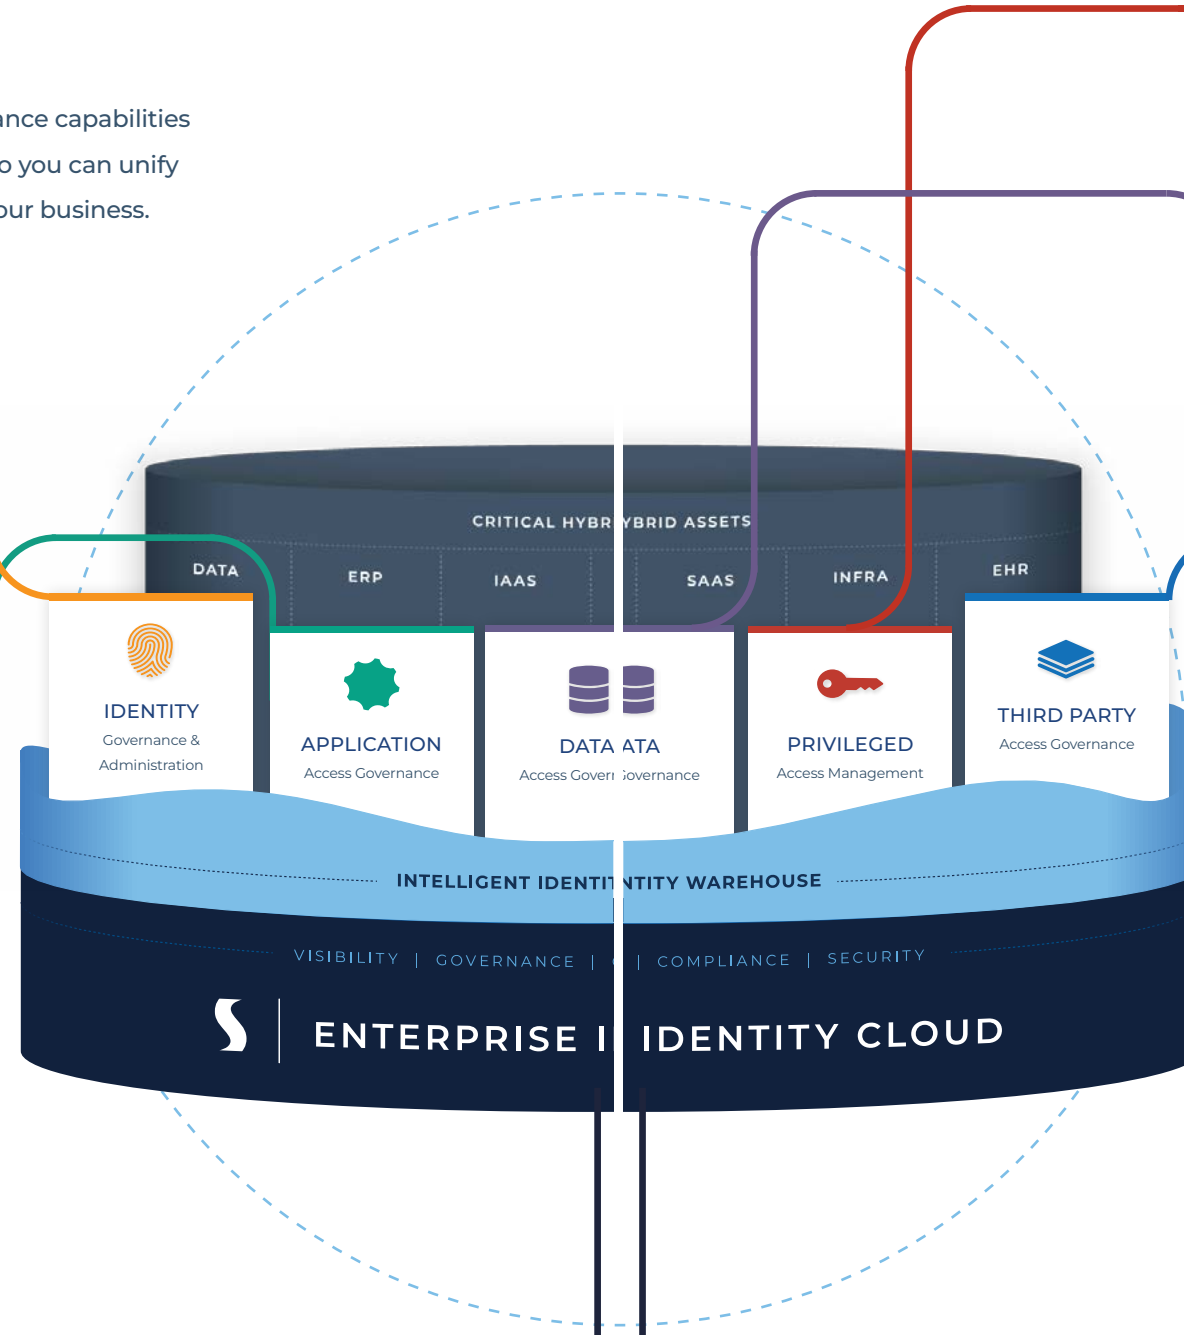

Ensure that users have seamless access and your organisation is in continuous compliance. Increase organisational efficiency and agility through automation and intuitive identity workflows. Powered by a comprehensive identity warehouse and user experience to drive frictionless access, Saviynt IGA enables Zero Trust in your hybrid and multi-cloud environment.

- Assign the right access for the right amount of time
- Improve productivity with a user-friendly experience
- Increase efficiency with automated last-mile provisioning
- Reduce regulatory overhead with assured compliance

Application Access Governance / GRC

Protect sensitive application access and satisfy governance, risk, compliance (GRC) requirements. Get comprehensive capabilities in Separation of Duty (SoD) analysis, emergency access management, role engineering and management, compliant provisioning, and access certification.

- Gain confidence with an audit-ready compliance framework
- Reduce fraud with cross-application SoD management
- Automate persistent controls monitoring
- Minimise risk and internal fraud with analytics

Cloud Privileged Access Management (PAM)

Provide complete privileged access protection to support ongoing business transformation and scale as your business needs evolve. Gain visibility and governance for every identity across your entire environment to improve your security posture and maintain compliance. It's fast to deploy and easy to manage, so you realise value from day 1.

- Manage privileged access for all applications and infrastructure
- Remove standing privilege and facilitate Zero Trust
- Provide just-in-time access with just-enough privilege to reduce risk
- Eliminate unused and over-permissioned accounts with usage analytics

Third-Party Access Governance

Securely manage third-parties throughout the engagement lifecycle. Internal sponsors shepherd the account from inception, through to access management, periodic reviews, and eventual decommissioning.

- Collaborate with third parties confidently
- Reduce risk across remote workforces
- Manage the lifecycle of third-party organisations, people, and identities
- Consolidate access visibility and controls onto a single platform

Data Access Governance

Discover, analyse, protect, and manage access to all of your data regardless of whether your IT ecosystem is on-premises, in the cloud, or hybrid.

- Stop sensitive data from falling into the wrong hands
- Gain access visibility into sensitive data
- Identify and mitigate control violations
- Define policies to prevent data exfiltration

Best-in-Class Solutions to Conquer Any Identity Challenge

Best-in-Class Enterprise Solution

The World's largest enterprises conquer identity and governance challenges through innovation — at internet scale.

Made for the Cloud — In the Cloud

Experience faster setup, easier upgrades, and agile cloud security delivered in a modern, low/no-code experience.

Built on Zero Trust

Automate dynamic access management and introduce just-in-time privilege elevation and time-bound access for any human or machine identity.

Easy to Implement. Fast to Deploy.

Bring identities under governance quickly, so you can adopt Zero Trust across hybrid and multi-cloud environments in weeks – not months.

The Only Converged Cloud Identity Platform

Break down siloed security apps and unify human and machine identity and application governance across your hybrid ecosystem.

Trusted & Secure

Meet evolving security and industry regulations with a SOC, ISO, PCI and FedRAMP Moderate certified identity platform.

Built for Business Agility

Our low/no-code approach and built-in integrations make implementation fast and easy.

Security You Can Trust

Meet your security goals with a platform that's safe and compliant from day 1.

Enterprise Ready & Customer Approved
