

SOLUTION GUIDE

Saviynt Automated Migration Tool

Connect Everything. Securely.

As organizations are looking for Cloud based services, SaaS (Software as a Service) is a popular choice of service model since it allows enterprises to migrate underlying infrastructure, middleware, app software, and app data to service provider's purview. Service provider manages the hardware and software, and with the appropriate service agreement, will ensure the availability and the security of the app and your data as well. Saviynt provides one such secure and holistic SaaS-based IGA platform to manage and control access to an organization's assets, application, or infrastructure – on-prem, hybrid, or multi-cloud and can be used to simplify identity lifecycle management with automated workflows and user-friendly tools.

However, migrating from legacy on-premises solution to modern cloud-based platform can be daunting and time-consuming task. Saviynt Automated Migration Tool is intended to alleviate these migration pain points and accelerate Application onboarding & Data migration to Saviynt.

Customers will be able to use this migration tool and expedite Application & Data migration from any legacy IGA tool to cloud based Saviynt platform. This is a custom developed tool using open-source libraries, without requiring any additional licensed software.

One of our customers is using this tool to migrate from RSA (Aveska) solution to Saviynt as part of their IAM modernization journey.

Accelerated Application Onboarding

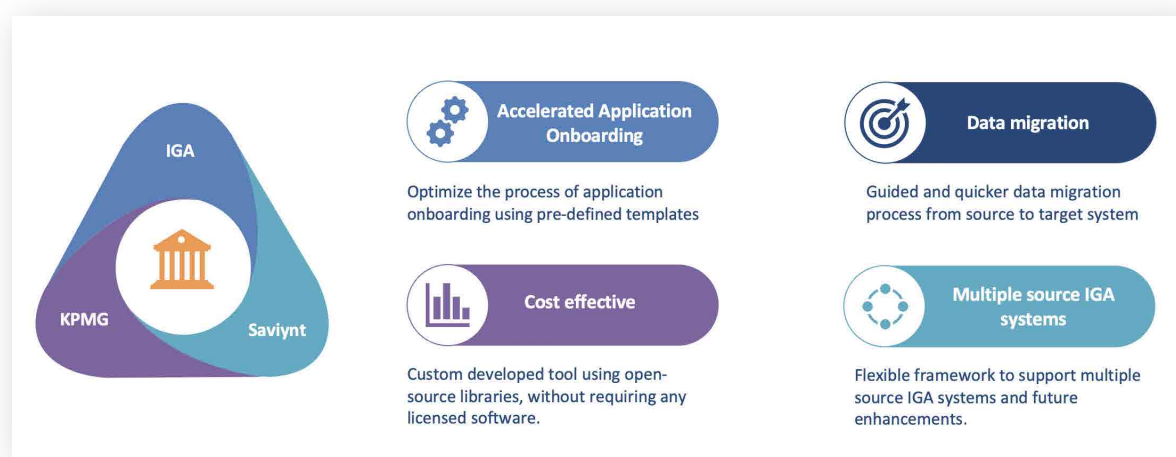

Expedited Data Migration

Cost effective solution to migrate from Legacy IAM solution

The Saviynt Automated-Migration tool is designed in such a way that it can take objects from any source IGA tool and migrate those to the Saviynt platform. Customers will also have an opportunity to review objects and their attributes before migrating them to Saviynt.

This solution is a Java/maven-based tool, which is delivered as a package along with operating guide and instructions.

Saviynt Exchange

Connect Everything. Securely.

Solution Benefit #1

- Migration from a legacy on-premises solution to cloud-based platform can be a challenging and time-consuming task. Customers can use the Saviynt automated migration tool to quickly migrate applications and data to Saviynt solution and sunset legacy platform to reduce capex.

Solution Benefit #2

- This solution is developed using Java/maven and other open source/licensed free libraries; hence deployment of this solution doesn't require any additional cost.

Solution Benefit #3

- Saviynt automated migration tool is architected and designed in such a way that it can be used to migrate objects from any legacy IDM tool. All objects are converted to a generic JSON layer before those are transformed and created into Saviynt objects.
