

SOLUTION GUIDE

# Saviynt Healthcare Identity Cloud

## Focus on patient care, not complex identity management

While new innovations allow healthcare organizations to enhance patient care, rapidly evolving technological environments are challenging administrators to effectively manage user identities and access. EHR adoption, new internet-connected medical devices (IoMT), and increased use of temporary staff are adding substantially to the number of identities, human and machine, that IT and security teams have to manage. Additionally, the adoption of new cloud-based enterprise applications has limited the effectiveness of currently installed legacy and home-grown identity tools.

Saviynt's Healthcare Identity Cloud (HIC) simplifies identity management in even the most complex hybrid environments, allowing healthcare organizations to focus on their main mission, providing excellent care to those in need.

Built on Saviynt's industry-leading Enterprise Identity Cloud (EIC) architecture, Saviynt Healthcare Identity Cloud (HIC) addresses healthcare providers' unique challenges in managing identities. The platform allows organizations to modernize their identity program and remove barriers to patient care delivery by providing frictionless user access, simplified administration, and access controls within a single converged framework that centralizes human and machine identity governance, privileged access management, third party access, and other critical identity functions.

### SIMPLIFY IMPLEMENTATION AND ADMINISTRATION

With pre-packaged use cases that ease effort and time to value, Saviynt HIC is configurable and robust enough to meet the needs of complex healthcare organizations, while also being simple and intuitive to implement, administer, and integrate. Configure and manage your IGA program using an extensive set of pre-built templates, robust control library, and an intuitive wizard to substantially reduce application onboarding times by up to 90%\*. Automate access provisioning, requests, and risk-based approvals, along with other Joiner, Mover, and Leaver processes. Use built-in identity matching and proofing to enable "one identity for life," with support for multiple personas under a single identity.

#### Empower the Workforce

Provide access quickly, accurately, and securely for all permanent and temporary staff & third parties, even as they change roles

#### Protect Patient and Organizational Data

Gain insights and govern your identity environment in accordance to identified risks

#### Enable Compliance

Deliver continuous regulatory compliance and robust reporting for audits

#### Improve Operational Efficiency

Reduce application onboarding and access certification times by up to 90% and 70% respectively\*

\*Total Economic Impact of Saviynt Enterprise Identity Cloud, Forrester, 2021

## REDUCE ACCESS DELAYS THAT COULD IMPACT CARE DELIVERY

Don't let administrative slowdowns impact care delivery. Use automation features to provide frictionless access through intelligent role and rule-based provisioning, as well as attribute-based access control. Leverage a user-friendly self-service portal for viewing, requesting, approving, and certifying identity access. Enable third-party self-registration and allow users to request or approve access from anywhere with a mobile app, browser plug-in, and collaboration tool integration (e.g., MS Teams and Slack).

Saviynt HIC provides privilege access management (PAM) with "break glass" capabilities for just-in-time access and the monitoring and reporting needed to maintain regulatory compliance. PAM also allows organizations to reduce standing privileges and risk without impacting services.

## SECURE PATIENT, WORKFORCE, AND ORGANIZATIONAL DATA

Saviynt HIC can help move your organization down the pathway to zero trust, no matter where you stand today. By providing a 360° view of all applications and identities (even shadow IT), Saviynt analytics can help you gain deeper insight into your environment and identify risk., which can help establish a roadmap for strengthening controls. Fine-grained application access and permissions ensure least-privilege access, while progressive risk profiling helps identify anomalous activities. Reduce the risk of standing privileges with just-in-time access elevation.

## ENSURE AND STREAMLINE COMPLIANCE

Out-of-the-box controls map to HIPAA, HITRUST, PCI, and other regulations to help you maintain continuous compliance. Integrate with your learning management system (LMS) to automate controls based on training compliance (i.e., HIPAA training). Compile and deliver attestation reports to auditors with end-to-end data trails. Oversee cross-application SoD management, including detection, monitoring, and compliance reporting.

### Frictionless Access

- Streamlined Onboarding
- Smooth and Secure User Transitions
- Automated EHR Provisioning
- Just-in-Time Access
- Access from Anywhere (mobile, browser, MS Teams, etc.)
- Automated Request Recommendations
- Policy Violation and SoD Conflict Detection

### Streamlined Approvals

- Automatic Non-Critical Access Approvals
- Risk Insights
- In-Line Collaboration
- Escalation and Delegation

### Governance Automation and Management

- Ownership and Succession
- Cross Application SoD Management
- AD and Service Account Management
- Third-Party Access Governance
- Data Classification
- Continuous Monitoring

### Certification and Compliance

- Business Process Workflows
- Intelligent Certification Campaigns
- Continuous Micro-Certifications
- Consolidated Reporting for Streamlined Audits
