

SOLUTION GUIDE

Saviynt EIC for Manufacturing

Securing the Fourth Industrial Revolution

Manufacturers operate in a complex identity landscape. Cloud migration, IT/OT convergence, supply chain integration, and the adoption of advanced robotics, automation, IoT and IIoT, have greatly expanded the threat landscape. While the benefits of digital transformation include better and quicker decision making, efficiency gains, and decreased costs, the number of identities you need to protect has also increased exponentially.

Managing this explosive growth of human and machine identities is increasingly complicated. Converging identity governance and management onto a single platform allows manufacturers to effectively streamline processes, strengthen security and decrease operational costs.

Saviynt Enterprise Identity Cloud (EIC) combines identity governance and administration (IGA), privileged access management (PAM), application access governance (AAG), third-party access governance (TPAG) and data access governance (DAG) in a cloud-architected platform that unifies controls and risk management for every identity, app and cloud.

SIMPLIFY DEPLOYMENT AND MANAGEMENT

Configure and manage your IAM program using pre-built templates, robust control libraries, and an intuitive wizard to reduce onboarding times by up to 90%.* Automate access provisioning, requests, and risk-based approvals, along with other joiner, mover, and leaver processes in the identity lifecycle.

Accelerate onboarding through invitation-based user registration and birthright account access provisioning. Provide self-service user onboarding to increase end-user productivity and decrease administrator workloads.

EASILY EXTEND GOVERNANCE

Saviynt extends standard IGA use cases to OT environments and can be configured to meet OT-specific use cases. Gain visibility and govern all OT and IIoT accounts — regardless of where they are located. Onboard individual OT identities and sites with repeatable patterns for future use by extending governance across multiple sites.

SAVIYNT EIC PROVIDES:

IGA, PAM, third-party, application access, and data access governance on a converged platform

360° visibility into all connected IT-OT identities

Integration of OT applications with active directory domains

Automated last-mile provisioning to onboard disconnected applications

Accelerated time-to-market through better monitoring and decision making

Reduce certification times by 70% or more*

Reduce application onboarding time by up to 90%*

*Total Economic Impact of Saviynt Enterprise Identity Cloud, Forrester, 2021

PROTECT THE SUPPLY CHAIN

Third parties often require access to organizational resources such as shared tools, applications, or data sets to provide critical services. But that access is often for a limited time. Saviynt helps you manage contractor, partner and other third-party identities. EIC integrates with many of the leading system of record (SoR) solutions for non-employee user identities and IDaaS federation solutions.

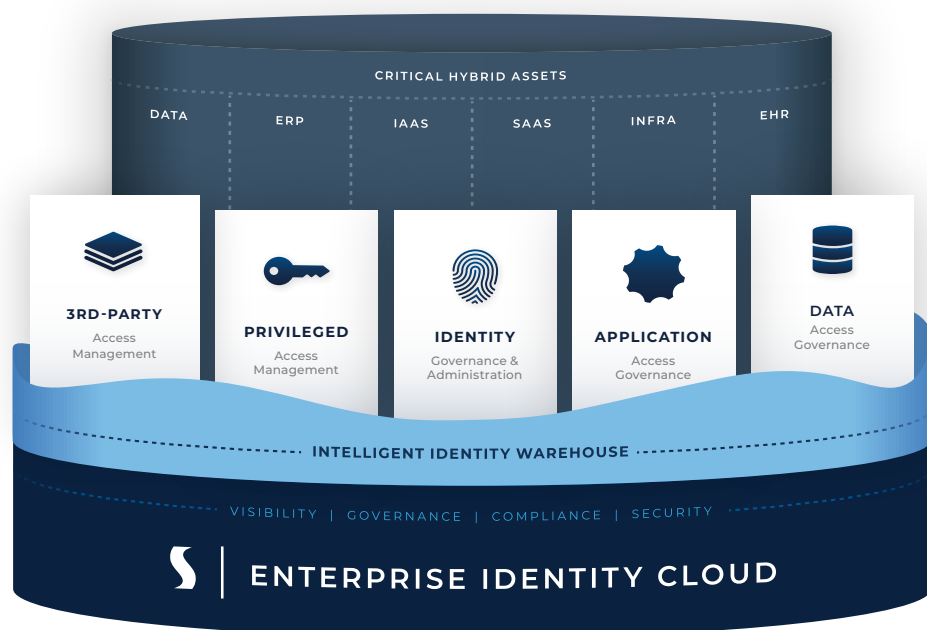

EXPEDITE CERTIFICATIONS

Saviynt makes it easy for business managers, application owners, role owners, and others to make informed decisions about access certifications. Prioritize critical access for certification reviews, understand certification decisions, trigger micro-certifications for continuous compliance, and automate processes to increase owner engagement, speed decisions, and reduce risk.

REDUCE RISK WITH ADVANCED ANALYTICS

Saviynt EIC ingests and exchanges risk data across GRC tools, risk platforms, and vulnerability management solutions, to unify and examine risk across access, compliance, activity, and endpoints. Enhance compliance decisions and detect new risks for data assets, applications, servers, and shadow IT when connected to ITSM or eGRC platforms. Automate lifecycle management, prevent risky behaviors, and enhance data-driven security and compliance decisions.

Saviynt's Enterprise Identity Cloud (EIC) unifies core IAM technologies into a single, centralized platform to provide 360° visibility and manage all human and machine identities.

Governance Automation and Management

- Ownership and succession
- SoD management and conflict detection
- AD and service account management
- Continuous monitoring

OT and IIoT Access Benefits

- Manage all identities from a single location
- Ensure continuous compliance
- Automate processes across all identities
- Gain full identity and application lifecycle management

Certification and Compliance

- Intelligent certification campaigns
- Continuous micro-certifications
- Application, entitlement owner, service account, and role owner certification
- Streamlined audit reporting

Enhanced Onboarding Experience

- Quicker deployment than traditional governance solutions
- Accelerated vendor onboarding and birthright provisioning
- Automated request recommendations

Risk Reduction

- Ingrained risk analysis
- Auto-remediation of non-compliant accounts
- Vendor account lifecycle management
- Emergency access management and audit log reviews

About Saviynt

Saviynt is the leading identity governance platform built for the cloud. It helps enterprise customers accelerate modern cloud initiatives and solve the toughest security and compliance challenges in record time. The Saviynt Enterprise Identity Cloud converges IGA, granular application access, cloud security, and privileged access into the industry's only enterprise-grade SaaS solution.
