SAVIYNT

Saviynt Identity Solutions for State & Local Government

Like many organizations, state and local governments are grappling with how to adopt an identity-centered approach to cybersecurity, in order to keep their networks, workforce and constituents safe. The challenge grows when contractors or employees change roles, go to a different agency, or leave the organization altogether. Keeping track of all these identities on top of legacy infrastructure can become an overwhelming task.

Saviynt Enterprise Identity Cloud combines identity, privileged access, third party access, applications, and data access governance into a single cohesive platform. Unify controls and risk management for every identity, app, and cloud across your entire government IT landscape. Onboard people, apps, and machines in minutes and selectively turn on access and governance functionality, while delivering a frictionless digital experience for your citizens and your workforce.

SIMPLIFY DEPLOYMENT AND MANAGEMENT

Configure and manage your identity program using an extensive set of pre-built templates, robust controls library, and an intuitive wizard to reduce application onboarding times by 90%.* Automate access provisioning, requests, and risk-based approvals, along with other joiner-leaver-mover processes associated with Identity Lifecycle Management

STREAMLINE COMPLIANCE

Saviynt simplifies identity governance so that your users have seamless app and infrastructure access without compromising compliance. Whether you are looking to meet regulatory compliance targets such as FedRAMP, StateRAMP, or Executive Order 14028 - or standardize on NIST or other cybersecurity frameworks, Saviynt's native intelligence, reporting, and advanced analytics capabilities can help. Our modern, intuitive interface and elastic cloud-based infrastructure simplifies management of standard user and privileged access to improve compliance and risk reduction objectives.

REDUCE THIRD PARTY ACCESS RISK

A growing number of security breaches have been due to third-party involvement. Saviynt delivers third party access governance capabilities provide robust identity lifecycle management for non-employees and suppliers with access management, periodic reviews and decommissioning

Reduce Cybersecurity Risks
Make risk-aware decisions using advanced intelligence & intuitive dashboards

Enhance User Experience
Provide secure, seamless access for all identities, including employees, citizens, third parties and service accounts

Modernize Legacy Infrastructure
Configure, use, and scale IGA with a modern UX/UI and elastic cloud-based infrastructure

Gain a Cloud Advantage
Increase agility & accelerate digital government initiatives with the industry's first cloud-native IGA solution

Improve risk management with 250+ risk controls, improve visibility and speed up remediation. Onboard and provision vendors quickly with an intuitive end-user experience. Benefit from a single pane of glass to manage risk and ensure governance of employee and third-party identities.

AUTOMATE SEPARATION OF DUTIES (SOD) MANAGEMENT

Rapid cloud adoption has introduced new challenges for government IT and security teams to implement consistent, compliant Governance, Risk, and Compliance (GRC) processes across all cloud and on-premises applications.

Saviynt Application Access Governance is a cloud-first GRC solution that sits above and integrates across all of your applications' security models to provide cross-application visibility, risk-based provisioning, and analytics to identify anomalous or risky SoD and policy violations and enable Zero Trust. Out-of-the-box rulesets and controls build the foundation for identifying both potential and real SoD violations. Saviynt's fine-grained access visibility into each application provides levels of detection not found in coarse-grained GRC solutions so that you can prioritize remediation efforts and provide an audit trail.

Saviynt's Enterprise Identity Cloud (EIC), a cohesive platform to manage your identity perimeter. Whether you need to enforce least privilege access, rein in third-party identity management, improve separation of duties (SoD) management or secure access to sensitive data, Saviynt can help you transform your security posture.
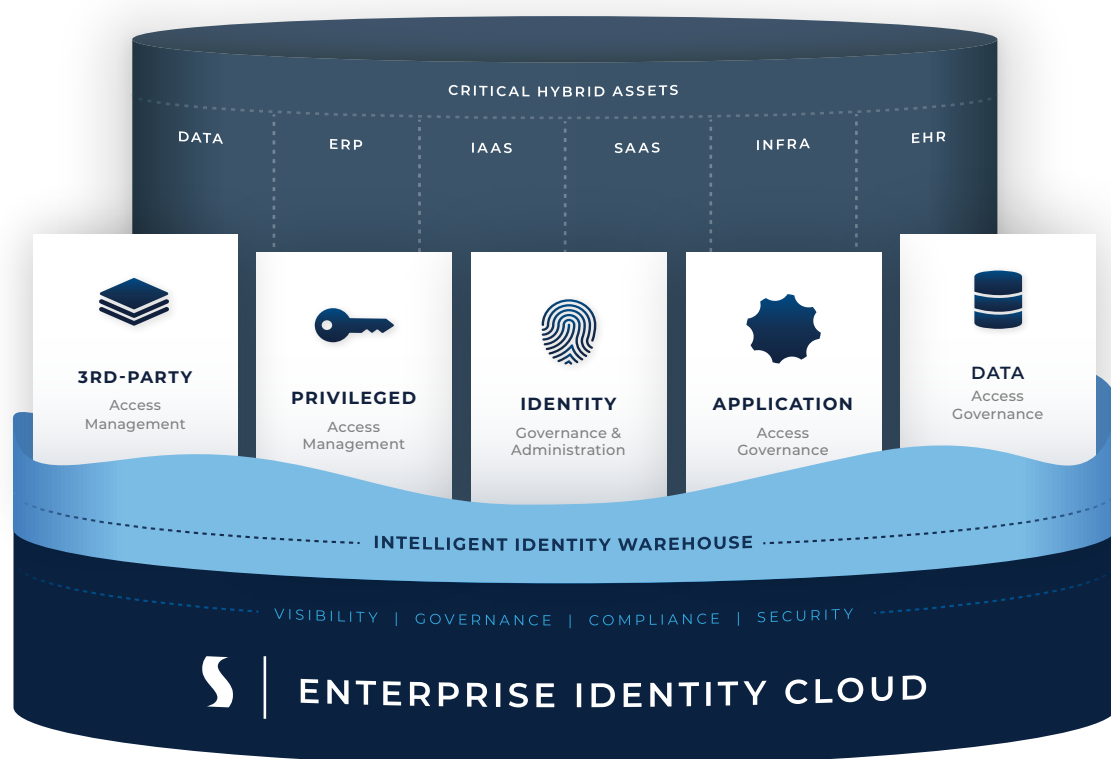

Frictionless Access

- Streamlined Onboarding
- Just-in-Time Access
- Access from Anywhere (mobile, browser, MS Teams, etc.)
- Automated Request Recommendations
- Policy Violation and SoD Conflict Detection

Streamlined Approvals

- Automatic Non-Critical Access Approvals
- Risk Insights
- In-Line Collaboration
- Just-in-time privileged access and role elevation requests

Governance Automation & Management

- Ownership and Succession
- SoD Management
- AD and Service Account Management
- Third-Party Access Governance
- Over-the-shoulder privileged session monitoring
- Continuous Monitoring

Certification & Compliance

- Business Process Workflows
- Intelligent Certification Campaigns
- Continuous Micro-Certifications
- Application, Entitlement Owner, Service Account, and Role Owner Certification
- Consolidated Reporting for Streamlined Audits
