

# Self-service application onboarding tool

Connect Everything. Securely.

## Problem Statement

For any enterprise IAM solution, integrating applications to Saviynt IGA Platform is a lengthy and laborious process. As well as involving multiple handoffs between application teams and IAM teams and dependencies, each onboarding requires manual deployment and configuration testing. This leads to long onboarding lead times, wasted effort for similar issues with each application and lack of progress in IAM rollout that would benefit users and improve security.

The Self-service onboarding tool allows applications teams to raise the request for integration with the Saviynt IGA solution by providing all the required information needed. By pulling together all the necessary JSON information into one place, Applications with multiple endpoints can be onboarded rapidly with ordered scripting for multiple tasks i.e. JML processes.

We can also include JDBC, LDAP and file based transformation withing the tool.

## Customer Value

Customers will experience a much improved time to value for their Fast Start programmes as we are able to onboard applications at an accelerated rate, giving customers better value, reduced cost and deployment times in line with sold expectations

The solution has been validated in live use with a number of customers using both Legacy applications and modern multi-endpoint services like the SaaS based products such as Atlassian suite of products.

## Solution Benefits

The Trevonix self-service application onboarding tool will help Saviynt to be deployed quickly and provide better ROI to the customer.

It can be used in the sales cycle to demonstrate to the customer the benefit of enabling rapid application onboarding that doesn't involve huge effort from the IAM team.

Allows better customer retention as more applications will be integrated with Saviynt solution at a faster pace.

To discuss the solution and see how it can benefit your Saviynt roll-out get in touch at [contact@trevonix.com](mailto:contact@trevonix.com)

**Reduces cost:** An efficient solution to manage all the application onboarding that reduces the friction and enables workflow-based onboarding

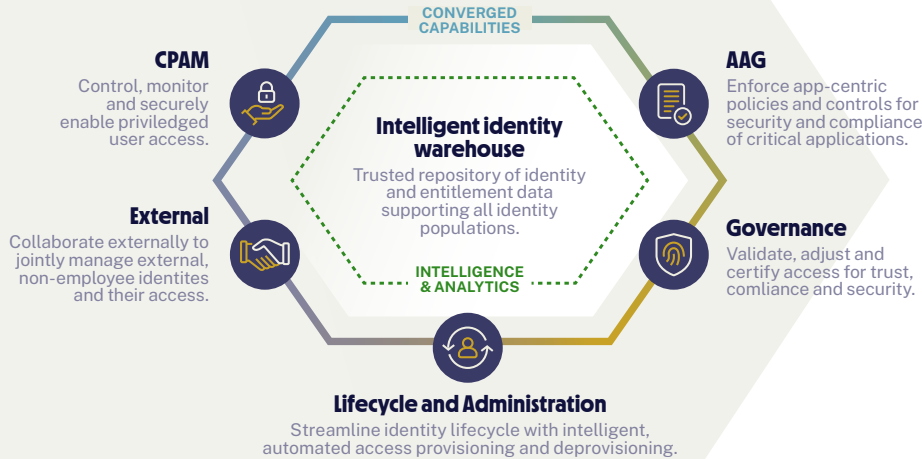

**Reduces dependency:** Application teams can initiate the request by providing the right information as they understand the application best.

**Reduces IAM workload:** The IAM team can focus on enabling the IAM system and receiving the application onboarding request with the required information. This enables the IAM team to focus on what matters to them.

**Reduces time:** Allow swift rapid onboarding of applications to IAM solution

**Reduces cost:** An efficient solution to manage all the application onboarding that reduces the friction and enables workflow based onboarding

Saviynt EIC combines core identity security capabilities in a single platform that enhances security while reducing costs and management headaches.

### Solution Benefit #1

- Rapid deployment
- Improved ROI
- Improved time to value

### Solution Benefit #2

- Staff cost reduction
- Ensures that onboarding can be done at the expected pace
